SUMMARY--Mission 1375

1. The only significant changes noted in coverage obtained on Mission 1375 are as follows:

A. Possible build up of aircraft at ALEPPO A/F. Twenty-five U/I aircraft were reported as compared to seven possible U/I aircraft on last coverage obtained on 17 March.

B. Increase of approximately 15 A/C at DAMASCUS A/F over coverage obtained 17 March. This consisted of an increase of meteors from three to ten; and an increase of U/I single-engine A/C from 24 to 32. Three Fagots were also noted.

C. At HAMA A/F, 11 Fagots were reported. These, and the three noted at DAMASCUS A/F are the first to show up on AQUATONE photography. Although [] designated these as Fagots (Mig-15) all ground source [] intelligence indicates they are actually Fresco's (Mig-17). It would be extremely difficult to distinguish the difference on photographic coverage. The 8400 foot E/W runway at HAMA is also reported completed.

2. Coverage was obtained on 15 of 18 A/F's scheduled this mission.
